Smart Science Seminar®

SATURDAY, OCTOBER 27 from 9 am to 12:30 pm

You didn't evolve from an ape.

Evolution has always been a *theory*. Evolution still is a *theory*. Evolution will always be a *theory*. And a lousy one at that.

This 3-hour, 3-session seminar facilitated by Drew Crandall, Chairman of the Creation Coalition of CT, is a good way to encourage and equip Christian teens and adults.

Session #1:

Introduction to Smart Science

We begin by examining foundations of scientific thought, and distinctions between observational and historical science. The reality is, it's smart to acknowledge that the universe shouts with evidence of intelligent design by an intelligent Creator.

Session #2:

Smart Science: DNA & Dinosaurs

Talk about smart! We look under the microscope and explore the mind-blowing world of DNA and nanotechnology. Since many people in today's culture are fascinated with dinosaurs, we examine scientific and Biblical insights on where these beasts came from, and how they disappeared from the earth.

Session #3:

Smart Science: Earth's Age & the Flood

Contrary to popular belief, scientific evidence and the Biblical record do not point to evolution over millions of years, but to a dramatically younger earth. At the conclusion, attendees will be inspired and equipped to have a more consistently Biblical worldview.
